

A portable, multifunctional 3-string-roboter

Designed
by
Mark
Scharonow
(Germany, 17yo)

Includes:
Automatic calibration
Full torque control
Full multifunctionality
Sensory redundancy
3x ASS600
1x MPU5060

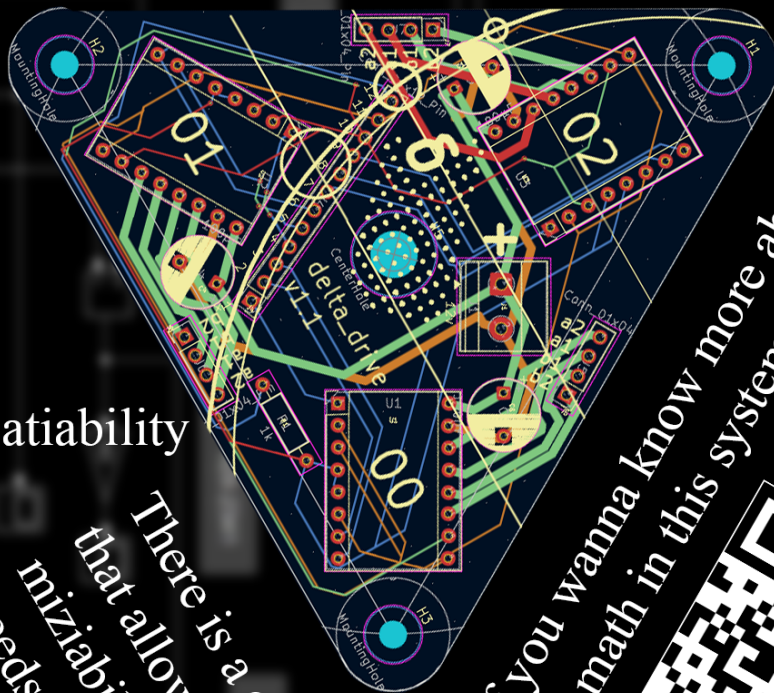

That's the assembly Github is here:
everything is licensed under CERN-OHL-S v2

$$\Delta(q_n)$$

aka "FLoaty"
FloatingFace
derived from "floating interface"

A custom PCB...
... with 3x TMC2209
... full prototype compatibility
... very cool design :3

There is a cheeseplate
that allows full custo-
mizability for your
needs and ideas...
...making them
just ✨float✨

If you wanna know more about
the math in this system:
